Tips for Monitoring Aerobic Exercise Intensity

Substantial health benefits are gained when adults achieve 150-300 minutes per week of moderate intensity exercise. or 75-150 minutes of vigorous intensity exercise per week. Several tools and methods are used to monitor exercise intensity. Utilizing these methods help adults achieve physical activity goals.

Talk test is a

way to gauge exercise intensity based on ability to carry on a conversation.

Heart

can be monitored by using a wrist watch and chest strap or a smart watch.

Perceived

is a subjective method to monitor how hard exercise feels.

Steady conversation is associated with moderate

exercise intensity where only intensity aerobic exercise. a few words are sustainable.

Vigorous intensity is an

- · A percentage of maximal heart rate indicates intensity (%HRmax)
- Moderate intensity exercise is estimated at 65-75 %HRmax
- Vigorous exercise is 76-96 %HRmax
- Target HR = (220-age) x %HRmax
- Commonly reported as a rating of perceived exertion (RPE)
- · Scale is a range between 0-10
- · Moderate intensity exercise is targeting an RPE of 3-4
- Vigorous exercise is an RPE of 5-7
- · Moderate intensity exercise is a step rate of 100 steps per minute, or 1,000 per 10 minutes
- · A common recommendation is to achieve 3,000 steps in 30 minutes
- · Vigorous intensity is > 100 steps per minute.

Rating 2 5 6 10 Somewhat **Maximal Descriptor** Rest Hard Very Very, Verv Moderate effort easy hard very hard

Motion sensors

are devices used to track steps and other activities.
